Sustainable Industry Classification System®(SICS®)
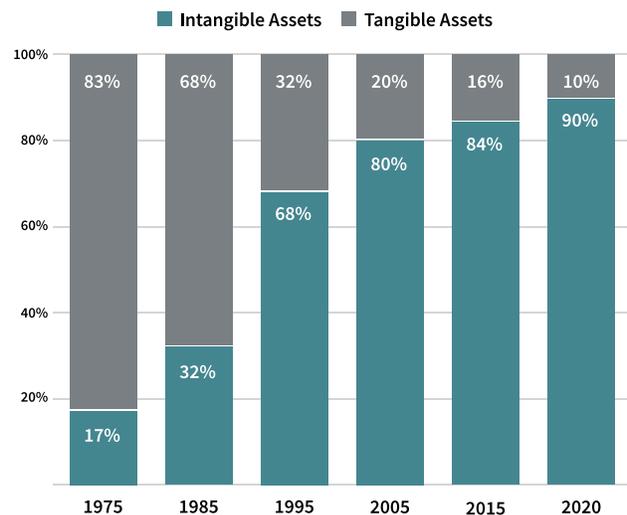

Capital Markets Through a Sustainability Lens

What is SICS®?

SASB SICS® taxonomy categorizes companies into sectors and industries in accordance with a fundamental view of their business model, their resource intensity and sustainability impacts, as well as their sustainability innovation potential.

Intangible assets, such as intellectual capital, customer relationships, brand value, and other forms of capital are growing components of corporate valuations. It is becoming clear that a company's market value is determined by more than financial performance.

That is why SASB has Standards for 77 industries that identify the subset of environmental, social, and governance issues most relevant to financial performance in the industry.

S&P 500 Market Value Composition

Intangible Assets   Tangible Assets

Year	Tangible Assets	Intangible Assets
1975	83%	17%
1985	68%	32%
1995	32%	68%
2005	20%	80%
2015	16%	84%
2020	10%	90%

Why SICS®?

By adapting traditional industry classification systems to reflect the unique sustainability profiles of sectors and industries, SASB's SICS® provides the building blocks for a potentially more precise portfolio construction, when paired with traditional taxonomies, that considers the impact of sustainability on the risk/return and correlation of industries and sectors.

Traditional classification systems often make categorizations that are either too granular or not granular enough to understand a company's shared sustainability challenges and opportunities.

SICS® vs GICS®

GICS® uses financial concepts, such as sources of revenue, to assign companies to a given industry or sector. The sustainability-based industry classification of SICS® helps SASB surface the disclosure topics that are likely to affect all or most companies in an industry. Industry to Industry, overlaying SICS & GICS taxonomies together reduces correlation in 95% of instances by an average magnitude of ~50%.

Standards Data Hierarchy
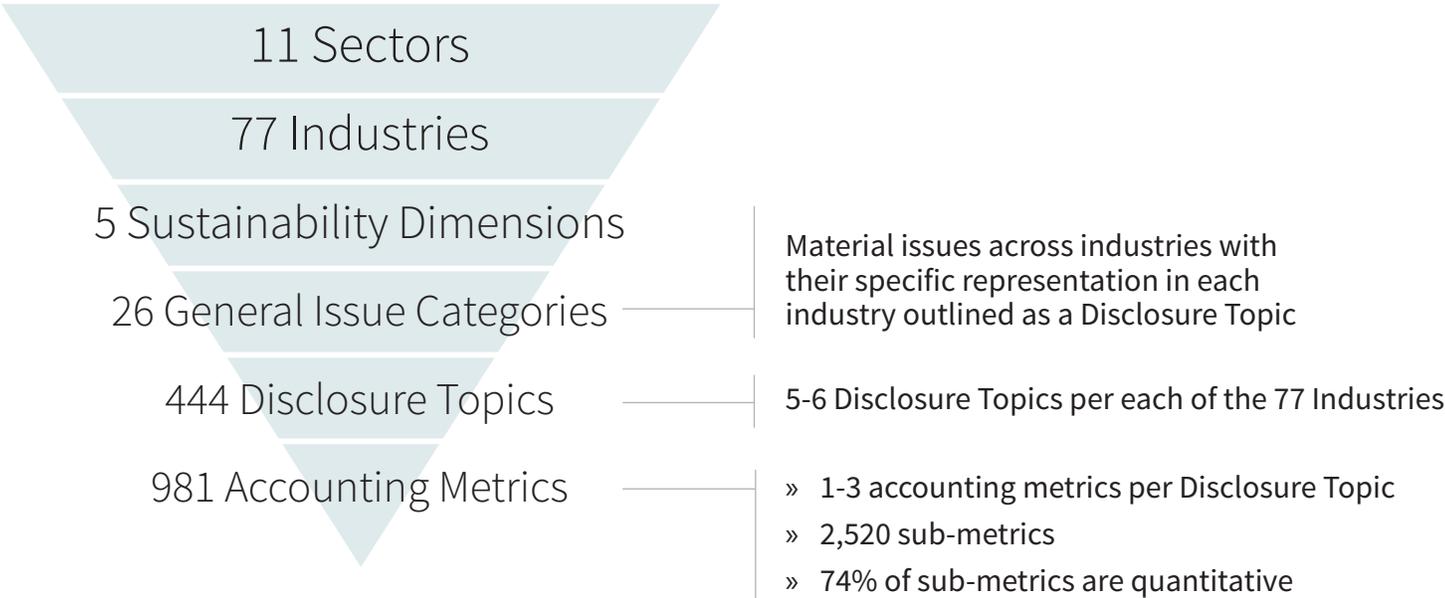

11 Sectors

77 Industries

5 Sustainability Dimensions

26 General Issue Categories —— Material issues across industries with their specific representation in each industry outlined as a Disclosure Topic

444 Disclosure Topics —— 5-6 Disclosure Topics per each of the 77 Industries

981 Accounting Metrics ——
» 1-3 accounting metrics per Disclosure Topic
» 2,520 sub-metrics
» 74% of sub-metrics are quantitative

Accessing the Sustainable Industry Classification System® (SICS®)

SASB offers 90,000+ Global ISINs and their associated Company Name, Country, SICS® Industry, SICS® Sub-Sector, and SICS® Sector in excel format. The SICS® master file covers major indices and much more. This file is updated on a quarterly basis to reflect market activity such as, IPOs, M&A, Delistings, and other corporate actions.

Organizations can access this content in two ways:

Licensing Program: Provides licensing rights to the Standards, SICS®, Disclosure Topic Financial Drivers, and Climate Risk Factors tied to (TCFD), along with marketing materials, technical support, and a robust toolkit for organizations interested in leveraging SASB IP in their processes.

SASB Alliance: SASB Alliance is a membership program and helps explore best practices to integrate material sustainability information into existing processes. Members receive ongoing educational resources and invitations to exclusive member-only discussions. Members share the belief that today's capital markets need standardized sustainability disclosure and effective ESG integration into investment practices – for the benefit of both companies and investors.
