Please see the attachment.

Dear,

I wonder why loan number set “general special” rather “hypercube-dimension”. In the case of loan number, I can input only one fact. It can not identify which member goes to.

Albert Chou

The top screenshot shows the Taxonomy Editor interface with the 'Definition Link' pane. The tree view shows 'Loans, Number [Line Items]' expanded to show 'Loans, Number [Table]', 'Bank Customer Type [Axis]', 'Bank Customer Type [Domain]', 'Corporate [Member]', 'Personal [Member]', and 'Small Business [Member]'. Below the tree is a table with columns: Element, arcrole, order, and system id (all).

Element	arcrole	order	system id (all)
Loans, Number [Table]	all (*)	1	1.sasb-definition.xml
Bank Customer Type [Axis]	general-special	1	1.sasb-definition.xml
Bank Customer Type [Domain]	dimension-domain (*)	1	1.sasb-definition.xml
Corporate [Member]	domain-member (*)	1	1.sasb-definition.xml
Personal [Member]	domain-member (*)	2	2.sasb-definition.xml
Small Business [Member]	domain-member (*)	3	3.sasb-definition.xml
Loans, Number	domain-member (*)	2	2.sasb-definition.xml

The bottom screenshot shows the 'Dimension' pane. The 'XLink Role' is 'Financials - Commercial Banks (FN-CB) - Loans, Value [Table]'. The 'Primary Item' is 'Loans, Value [Line Items]' and the 'Hypercube' is 'Loans, Value [Table]'. Below this is a table for 'Bank Customer Type [Axis]' with columns for 'Corporate [Member]', 'Personal [Member]', and 'Small Business [Member]'. The table shows 'Loans, Value [Line Items]' and 'Loans, Value' in the first column.

	Corporate [Member]	Personal [Member]	Small Business [Member]
Loans, Value [Line Items]			
Loans, Value
