

Muramoto Takahide

Mar 21 11:10 pm

Hello All,

I'm a development member of Fujitsu Interstage XWand.

I loaded the downloaded Taxonomy Packages and the sample Inline XBRL document by our tool.

Regarding the former, improvements are summarized on the section "" in the attached file.

For the latter, XBRL 2.1 and Dimension errors were detected as on the section "" in the attached file.

I summarized my thoughts on these errors on the section "" in the attached file.

Could you confirm the attached zip file with them?

Best regards,

-Muramoto Takahide

<<About taxonomy packages>>

There were two improvements to the schema included in the taxonomy packages.

1. Importing Schemas for Formula Specifications:

The schemas for the Formula specification were imported as follows.

If formula isn't used, I don't think it is necessary.

sasb-dei.xsd

```
<xsd:import namespace="http://xbrl.org/2008/label"
schemaLocation="http://www.xbrl.org/2008/generic-label.xsd"/>
```

```
<xsd:import namespace="http://xbrl.org/2010/message"
schemaLocation="http://www.xbrl.org/2010/generic-message.xsd"/>
```

```
<xsd:import namespace="http://www.xbrl.org/taxonomy/int/lei/2020-07-02/functions"
schemaLocation="https://www.xbrl.org/taxonomy/int/lei/2020-07-02/lei-formula-functions.xsd"/>
```

```
<xsd:import namespace="http://xbrl.org/2010/custom-function"
schemaLocation="http://www.xbrl.org/2010/custom-function-implementation.xsd"/>
```

```
<xsd:import namespace="http://xbrl.org/2010/message/validation"
schemaLocation="http://www.xbrl.org/2010/validation-message.xsd"/>
```

2. Import identical schemas with different system identifiers:

The same schema has been imported in the base taxonomy, but the system identifiers of both are different as follows.

I think it should be unified with the description of "https://".

sasb.xsd

```
<xsd:import namespace="http://www.xbrl.org/dtr/type/2020-01-21"
schemaLocation="https://www.xbrl.org/dtr/type/2020-01-21/types.xsd"/>
```

tcf.d.xsd

```
<xsd:import namespace="http://www.xbrl.org/dtr/type/2020-01-21"
schemaLocation="http://www.xbrl.org/dtr/type/2020-01-21/types.xsd"/>
```

<<About sample data>>

When loading the sample Inline XBRL document, some errors were detected that this document doesn't comply with the XBRL 2.1 and Dimension 1.0 specifications.

For details, see the attached file "validation_result.txt".

These errors fall into the following three categories.

1. Extended taxonomy:

In some linkbases, some links were found with the undefined element in the base taxonomy.

Please check to see if these elements should originally be defined in the base taxonomy.

sasb:LossesAsAResultOfLegalProceedings

sasb:LossesAsAResultOfLegalProceedingsLineItems

sasb:LossesAsAResultOfLegalProceedingsTable

sasb:NatureContextAndCorrectiveActionsTakenAsAResultOfMonetaryLossesFromLegalProceedingsText
Block

sasb:NatureContextAndCorrectiveActionsTakenAsAResultOfMonetaryLossesFromLegalProceedingsText
BlockLineItems

sasb:NatureContextAndCorrectiveActionsTakenAsAResultOfMonetaryLossesFromLegalProceedingsText
BlockTable

2. Inline XBRL documents:

Five facts with the following undefined elements were found in the base taxonomy.

Please check to see if these elements should originally be defined in the base taxonomy.

sasb: LossesAsesAresultOfLegalProceedings

3. Inline XBRL documents:

In the following two facts, we found that the context didn't match the dimension definition of the base taxonomy because it didn't have dimension information.

The current content and the compliance with the dimension definition for that context are described below.

Please check if it should be the latter.

[Fact1]
